Solution-oriented and responsible professional with a strong desire to join your team!

I am an accurate and positive person who enjoys learning new things. I am curious, analytical, and detail-oriented. I am an engineering graduate, flexible, and a fast learner. I am ready for new challenges and would love to work as a data analyst or programmer. I have studied frontend development for six months through a course at IT-Utvikler AMO/Kodehode and have gained experience with HTML, CSS, JavaScript, React, and Figma. I am now seeking an opportunity to apply my skills in practice. During the course, I designed an online store in Figma with a focus on user-friendliness and modern design, created an API-based app in JavaScript to display information about countries, and built a React app for children with a Christmas wish list. I want to use my skills in analysis and programming to contribute to a great team and make a difference.

EXPERIENCE
